DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-54, drawn to creating and evaluating strategies, including providing a plurality of modules wherein modules has capability to interact with an expert task manager, classified in class 705, subclass 7.
 - II. Claims 55-56, drawn to an apparatus for automating decision model updating and reporting, classified in class 705, subclass 8.
 - III. Claims 57-58, drawn to a decisioning client apparatus, including generating transformations of data and generating at least one score based on at least one score weight of at least one scorecard at a time, classified in class 705, subclass 7.
 - IV. Claims 59-67, drawn to a score tuner performing administrative tasks associated with updating of score weights, including determining which scorecards are candidates for tuning, classified in class 705, subclass 7.
 - V. Claims 68-71, drawn to estimating an uncertainty interval around at least one estimate of at least one expected outcome, including quantifying said uncertainty interval due to variation based on case- level variation, model variation, and portfolio composition, classified in class 705, subclass 7.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, IV and V are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as creating and evaluating strategies, including providing a plurality of modules wherein modules has capability to interact with an expert task manager. In the instant case, invention II has separate utility such as an apparatus for automating decision model updating and reporting. In the instant case, invention III has a separate utility such as generating transformations of data and generating at least one score based on at least one score weight of at least one scorecard at a time. In the instant case, invention IV has separate utility such as a score tuner performing administrative tasks associated with updating of score weights, including determining which scorecards are candidates for tuning. In the instant case, invention V has separate utility such as estimating an uncertainty interval around at least one estimate of at least one expected outcome, including quantifying said uncertainty interval due to variation based on case- level variation, model variation, and portfolio composition. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and the search required for Groups I, II, III, IV and V are not required for each of the other Groups, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
